EXECUTIVE DIRECTOR

Memo(23)12

6 February 2023

## 2023 ISO Ethanol Yearbook

The ISO is pleased to announce that preparations for the **2023 ISO Ethanol Yearbook** are already under way. The new edition of the Ethanol Yearbook is expected to offer over 100 pages of both statistics and in-depth analysis of the world fuel ethanol market. The book will include data on world fuel ethanol production, consumption and trade as well as individual national balances with data series on production, import, export, consumption, stocks and prices for key countries. Additional tables with data on ethanol sucrose content in cane, sugar cane/beet pricing, government policy and mandated biofuel inclusions, alternative feedstocks and ethanol vs. sugar realization, among others, are also included.

In the hope to continue to expand the coverage of this publication, the Executive Director would like to urge members **to complete the attached questionnaire** and send it to [economics@isosugar.org](mailto:economics@isosugar.org) **by latest 25 April 2023**.

Assuming that the questionnaire responses are received by the proposed deadline, the 2023 ISO Yearbook would become available in September.

Given the relatively short timeframe allowed for the preparation of this publication, as well as the time requested by the printing company, the Secretariat would like to inform that data returned by members after the deadline may not be included in the Ethanol Yearbook.
